DETAILED ACTION

1. Claims 1, 4, 5, and 7-12 are pending for examination as interpreted by the examiner. The amendment and arguments filed on 2/26/07 were considered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1, 4, 5, and 7-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 11, and 12 recite the limitation "pit ratio" in each claim. The pit ratio is never explained further. Although it is calculated, there is no indication of what it is used for. In addition, the claim should read "a pit ratio" as opposed to "the pit ratio" since it is not mentioned previously. Claims 4, 5, and 7-10 are dependent on these rejected independent claims. There is insufficient antecedent basis for this limitation in the claims.

Double Patenting

3. Claims 1, 11, and 12 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 and 7 of U.S. Patent Application 10/627131. Although the conflicting claims are not identical, they are not patentably distinct from each other because of the reasons stated below.

Claims 1, 11, and 12 recite as the inventive feature, detecting "a pit level ... and at least one of a read level and a write level, wherein the pit level represents a level of

the optical beam reflected from the from the optical disk while the optical beam is forming a pit during the test recording operation" which is the same as claims 1 and 7 of the patent application.

It is clear that all the elements of claims 1, 11, and 12 are to be found in claims 1 and 7. The difference between claims 1 and 7 of the application and claims 1, 11, and 12 of the patent application lies in the fact that the patent application claims include recording data as opposed to laser calibration. Thus, it would be obvious to test record before recording in order to perform the function of accurately calibrating the laser. Therefore, claims 1, 11, and 12 are not patentably distinct from claims 1 and 7. All other claims are rejected with their respective parent claim 1.
